

Digital Gold

Fast, energy efficient Proof-of-Participation, fiat-like, inflation-adjusted global money with .00001 transaction fees.

There are no mining rewards. Community members grow the Digital Gold Network by downloading and running a computer wallet, which becomes a node on the Network.

Bitcoin Paved the Way

Early adopters pioneered the path for the early majority.

Bitcoin is a digital commodity, easily traded for currency, commodities, goods & services.

DGD Sits on Bitcoin Rails

Bitcoin-based apps can accept Digital Gold.

Contributions will pay for this app/exchange adoption.

Bitcoin has 100M Users.

Analyses up to September 2024 suggests Bitcoin's hashrate has reached levels as high as 760 Exahashes per second (EH/s).

Digital Gold must match total users and computing power to have equal value to Bitcoin.

How to Achieve that Goal:

The Digital Gold Network has 1,000 levels to reach 100M nodes.

As the number of nodes (Wallets) increases by 0.927151463058% the Digital Gold Network increases in value by 1.4510488825%, which is reflected in the value of DGD.

A First-Come-First-Serve Model

The Network adds 0.927151463058% new nodes per level.

Members contribute 20-3826 USDC/T (or the total amount still available for contribution validation), which is applied each level until the member's balance in USDC/T is zero. As USDC/T is applied to price validation at each level, DGD appears in the member's Wallet.

Digital Gold is Fairly Distributed

1.882% of Bitcoin owners hold 92.792% of ALL Bitcoin.

Participation & Price Validation assures DGD is evenly disbursed through all 1,000 levels of Community Network growth.

Digital Gold is Inflation-Resistant

After Level 1,000, DGD is pegged to a basket of crowdsourced global inflation indexes to preserve the community's buying power.

Digital Gold rises in value as government-issued fiat buying power declines.

How is Inflation Tracked?

The monthly price of DGD will be adjusted based on community-approved online inflation resources.

Food, clothing, shelter, communication, transportation & energy are the basic needs of a society. Inflation is an unfair tax on buyers, of which they have no control. DGD hopes to solve this.

DGD Will Trade at Last Price

Digital Gold is the first fiat-like cryptocurrency, whose stable price is set by the value of the underlying decentralized Network.

As DGD reaches each level, the price remains stable until the next level. All exchanges, wallets and crypto apps receive price-discovery from the Digital Gold Explorer API, which updates automatically.

Merchant Adoption

Payments in DGD are nearly instant.
Transaction fees are 0.00001.

Members are rewarded in DGD for recruiting local merchants to accept Digital Gold. Merchants are rewarded in DGD for signing up, increasing merchant adoption through membership.

Where Do Contributions Go?

30% of member contributions are donated to OG crypto projects.
70% is used for promoting the Network and growing the Community.

Development teams & foundations for Bitcoin, Bitcoin Cash, Blackcoin, Cardano, Dash, Dogecoin, Litecoin, Peercoin, ZCash and Bitpay shall each receive 3% of member contributions. Disbursements shall occur once, daily.

DGD is committed to supporting the development of top-tier coins/projects.

Unvalidated DGD remains in the Treasury and is considered to be in circulation.
Some unvalidated DGD will be provided as rewards for merchant signup.

Governance

Founding members of the Digital Gold community act as custodians over the Digital Gold treasury.

Custodians pay dev teams, members and costs, and provide quarterly and annual audits.

DGD is Tradeable on Partner Exchanges

November 29, 2024 at

Regional Exchange Partnerships will be announced on a weekly basis on X @DigitalGoldOrg

Regional exchanges allow merchants and members to easily trade DGD for their local fiat currencies.
